GrokAlita White Paper

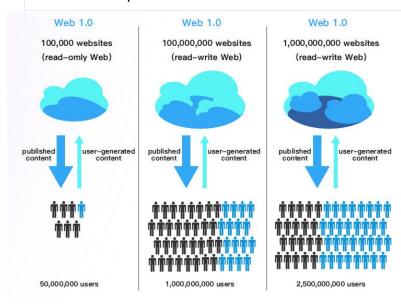

A new economic closed loop creates the world's largest unilaterally rising decentralized trading platform

1. What is Web3.0? Web3.0, built on the foundation of blockchain technology, represents a decentralized, trustless, and permissionless next-generation internet. Users no longer need to trust centralized institutions but can rely on code logic to ensure strict adherence to various protocols. Its core feature is that data ownership belongs to the user. Each user can control their identity, data, and assets, thereby mastering their destiny and future. This will initiate a new digital era, breaking the monopoly of giants in Web2.0 and creating many new business models.

Web3.0 has the following characteristics:

- Ownership: Users can control their data and digital assets on the internet.
- Trustless: Independent of third-party intermediaries.
- Permissionless: Open-source code, resistant to censorship, and freely accessible.
- Globalization: Assets freely flow globally.
- Interoperability: Data is publicly transparent and openly shared.
- 2. The Ecosystem Structure of Web3.0 Web3.0 encompasses various domains including entertainment, e-commerce, social networking, finance, and banking. Almost every application type

one can think of is launching a Web3.0 segment. Components like Defi, NFT, DAO, Metaverse, GameFi, and Exchange, which form the underlying architecture of Web3.0, are actively integrating and innovating. The biggest highlights of Web3.0 are its anti-monopoly stance, platform independence, and user ownership.

3. GrokAlita: Building a New Ecosystem Exchange for Web3.0 Societal needs have propelled the development of technology, which in turn has led to the birth of new eras. The human society's demand for information development led to the birth of the internet, pushing humanity into a vibrant and opportunity-rich digital information age. The burst of the internet bubble gave rise to Web 2.0, contributing unparalleled economic growth in areas like information consumption and content creation. This represented a significant era in human evolution, bringing new ways of working, consumer information, and progress in human civilization. Web 3.0 is hailed as a technology paradigm driven by the creator economy and represents the next transformation of the internet. Web 3.0 needs to be rebuilt with a focus on technology, architecture, design, and talent participation to achieve a decentralized internet. GrokAlita, as a model of exchange aggregation in the ecosystem, is committed to boosting the development of the real economy. It aims to empower the construction of a new financial system in the Web 3.0 era, helping everyone

to trade in a faster, safer, and more affordable way in the age of

Web3.0.

Three Major Advantages of the Platform

- Price Stability: On the ALITA decentralized trading platform, the price of all project tokens will not fall.
- 2. Unique Trading Mechanism: Unlike PancakeSwap and Uniswap, where buying leads to a price increase and selling to a decrease due to a single pool system, ALITA Exchange operates differently. All users can launch their own projects on the ALITA platform, including startups and teams. The SEAL TOKEN exchange's native design is deflationary mining output.
 - Most mining projects in the market are inflationary, leading to an increase in circulating tokens and eventually a downward spiral in token prices. On the ALITA platform, no tokens are in circulation at the initial issuance of any project. Tokens mined and cashed out are immediately destroyed, meaning a decrease in market

circulation and a deflationary effect, leading to a continuous and long-term price increase.

- 3. **Project Incubation Platform**: The smart contract of the ALITA project incubation platform is open-source and permissionless. Any project can issue tokens on the platform, and the platform renounces control. There is no withdrawal permission for third-party LP tokens or other tokens stored in the contract, ensuring no control by individuals or centralized institutions. All issued tokens by a project must be 100% deposited into the contract, with a fixed system allocation (70% LP pool, 30% mining pool), resulting in zero market circulation.
 - Investing in mining yields a 1% daily return in gold standard, akin to buying a mining machine with a one-year lifespan. After a year, the machine stops producing. This mechanism does not favor early or late participants, avoiding the issue of hash power weight seen in Bitcoin mining where early miners gain more, and later participants face a prolonged ROI period.

Basic Information of Platform Token

- Tokens are destroyed upon realization, entering a "black hole".
- Total token supply is 77.77 billion.
- Compared to conventional cryptocurrencies, GrokAlita trading platform tokens have more attributes and uses, including but not limited to:

- 1. Serving as a medium for crowdfunding on the trading platform.
- 2. Acting as a transaction fee within the platform, usually with a discount.
- Used as on-chain fuel after the platform's decentralization, akin to paying transaction fees to miners.
- Participation in platform activities, such as candy distribution and promotional events.
- Acting as a medium for trades, paired with other cryptocurrencies.
- 6. Realizing certain investor rights, like buybacks, priority in new coin offerings, and profit-sharing.

Team Introduction

- Edmund, Co-founder, has 18 years of experience in technology finance
 and 12 years in crypto industry management. He has managed multiple
 fund institutions and participated in early private placements of popular
 projects. He now fully oversees and participates in the global
 development strategy and long-term planning of GrokAlita trading
 platform, guiding global investment construction.
- Christopher, CTO, with over 15 years of computer programming experience and 6 years in crypto industry-related technical architecture design, system analysis, product development, platform construction,

and performance optimization. As the CTO of GrokAlita, he is responsible for the overall technical development direction and oversees the implementation and effectiveness of the technology strategy.

- Damek, CMO, has 12 years of traditional finance marketing experience
 and 8 years in the crypto market. As CMO of GrokAlita, he oversees the
 platform's marketing philosophy and market planning based on his
 extensive experience; he develops marketing strategies and
 implementation plans to ensure comprehensive and flexible market
 solutions for GrokAlita.
- Caedmon, CFO, an RFP and CFA certified financial planner with over 15 years of experience in finance and corporate financial management, and more than 10 years in capital operation management. He is responsible for the overall financial strategy deployment and capital operation management of GrokAlita.

Planning and Development

1. **Comprehensive Product Ecosystem**: Includes cryptocurrency spot trading, contract trading, forex trading, NFT digital collectibles, chain games, open market makers, quantitative trading and copy trading communities, open institutional seats, PoC-based mining, DeFi, wealth

- management, asset management, fund management, digital banking, and credit card services.
- 2. **Win-Win Partner Ecosystem**: GrokAlita plans to establish an entrepreneurship accelerator structured around a research institute, incubator, and ecological fund.
 - Research Institute: Focused on blockchain technology and digital currency economics research.
 - Incubator: Mainly for incubation and investment, empowering top blockchain and digital currency talents, enterprises, and communities.
 - Ecological Fund: Based on the social impact fund established by the platform, not solely focused on high investment returns, serving both the platform and the entire ecosystem.
- 3. Vision and Goals of GrokAlita Trading Platform: Committed to creating a new financial system for global users, breaking down barriers in cryptocurrency, and lowering the trading threshold for derivatives.
 Adhering to a value system of safety, excellence, and innovation,
 GrokAlita aims to provide outstanding liquidity and low trading costs, enabling users to achieve their investment goals swiftly. The one-stop service allows users to freely allocate global assets and enjoy an ultimate trading experience.

4. Value Belief of GrokAlita Trading Platform: Committed to creating an ultimate trading experience, GrokAlita believes in the responsibility of the brand and in conveying social responsibility, striving to be the most competitive and vibrant enterprise. GrokAlita plans to launch contract trading in 2024 and form a technical team. The Web3 working group will also be launched, covering the entire industry layout: wallet, socialfi, gamefi, RWA, etc. The deployment and testing of Wallet technology and team formation will be completed in 2024. GrokAlita aims to become a mainstream exchange by 2025, serving as a springboard to the next bull market.

Disclaimer

1. Disclaimer: This document is for information purposes only. The information herein does not constitute investment advice, intention, or inducement. Any similar proposal or solicitation will be made under trustworthy terms and applicable securities laws. This document is neither a call for buying or selling securities nor any form of contract or commitment. GrokAlita clarifies the risks to users, and investors accepting the risks are responsible for any consequences. GrokAlita does not bear any direct or indirect losses incurred from participation in the project, including economic losses due to user transactions, errors,

or inaccuracies due to personal understanding, or losses from trading various blockchain assets.

2. Risk Warning:

- Security: Many digital asset services have ceased operations due to security issues. Although GrokAlita places great importance on security, absolute safety is not guaranteed.
- Competition: The future of DEFI in the blockchain industry is promising but competitive. GrokAlita views this competition as a driving force for development.
